# Our Story

Since our founding in 2015, Terapot has been dedicated to the art of crafting fiberglass planters with attention to quality. Our skilled craftsmen ensure that every aspect is perfected, from the initial concept to the finishing touches.

As we continue to grow, our unwavering commitment to detail sets us apart. When you choose a Terapot planter, you choose elegance and sophistication, down to the smallest, carefully considered features. Thank you for joining us on this journey.

# Why Terapot

## 6 key benefits

### Lightweight

Our planters are incredibly lightweight, making them easy to move and arrange in your desired space. Say goodbye to heavy lifting and hello to effortless gardening.

### Durability

Built to last, our planters are made from high-quality materials to withstand the test of time and resist wear and tear, ensuring your plants thrive for years to come.

### Weather Resistance

With no corrosion worries and UV protection, our planters are tough enough to withstand various weather conditions, keeping their vibrant colors and impeccable finish intact.

### Strength

Inspired by aerospace technology, our planters are made from fiberglass, bringing the strength and reliability of spaceships, airplanes, and yachts to your garden.

Applying resin with roller on glass fibers.

## Handcrafted

Each planter is handmade by skilled craftsmen, adding a touch of craft and uniqueness to every piece that leaves our workshop.

## Cost - Effective

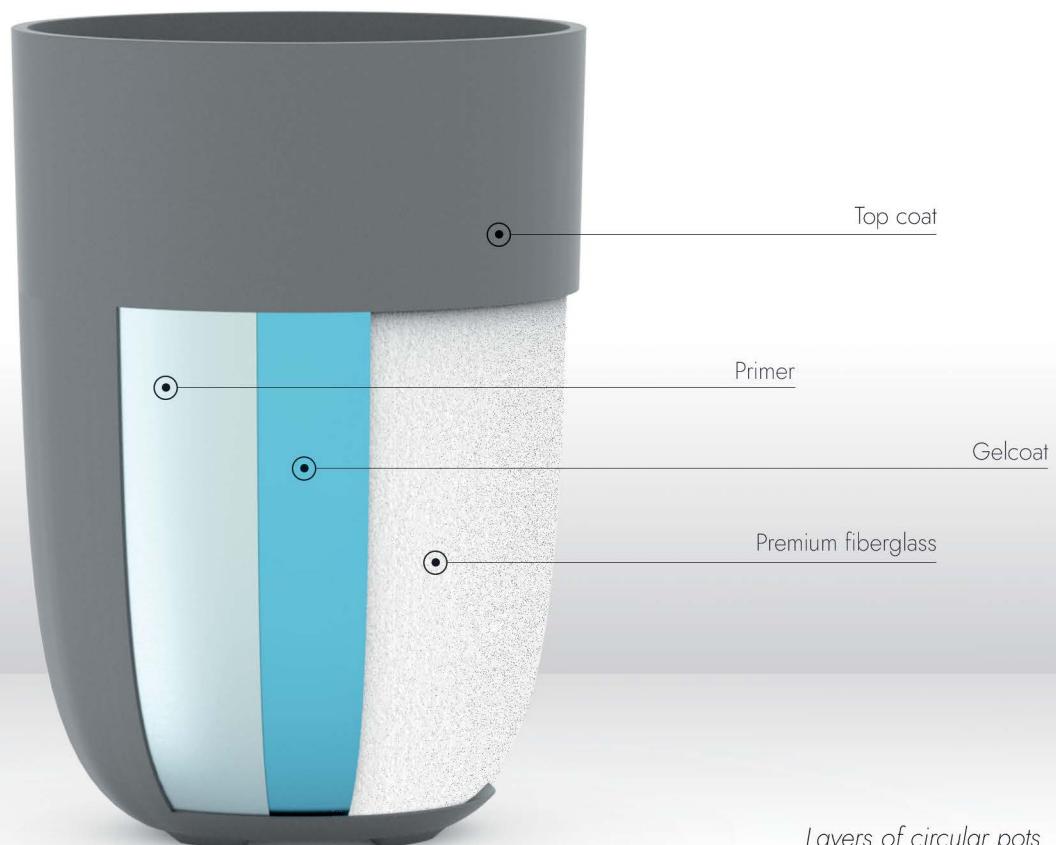

Invest in a long-lasting solution with our planters. They may cost more upfront compared to other materials, but their superior durability ensures they outlast traditional options like wood, concrete, and metal, saving you money in the long run.

# Circular Pots

| making - crafting |

Terapot proudly presents our circular pots, expertly crafted from a fiberglass laminate with a four-layer composition. This includes a premium fiberglass layer for durability, a top gelcoat for a smooth finish, a primer for added protection, and a top coat of high quality paint.

These pots seamlessly merge the sturdiness of fiberglass with exquisite finishes. Discover the raw beauty of fiberglass with Terapot.

*Layers of circular pots.*

Applying gelcoat to create an Oblo pot model.

# Making Process

Circular fiberglass planters are made using a combination of robotic technology and handmade process that involves the creation of molds. Layers of fiberglass mat or cloth, soaked in resin are placed inside these molds to precisely shape the structure of the planter.

Afterward, the planters are removed from the molds and excess material is trimmed to achieve a perfect result.

*Taking the Drina pot out of the mold.*

*Drina pot sanding.*

## Crafting Excellence

Prior to painting each pot, we focus on perfecting every detail. This process includes thorough sanding and precise grouting to ensure the highest level of esthetics in our finished products.

These handmade fiberglass planters showcase a high level of detail and offer a unique and ideal solution for enhancing gardens and outdoor spaces.

*Putting a hyper-core panel of standrad pots into a press.*

# Rectangular Pots

## | hyper - core construction |

The collection of rectangular pots is individually handcrafted from a special *Hyper-core construction* panel consisting of a polypropylene sheet in the middle and fiberglass layers on both sides. In contrast to conventional versions made of fiberglass sheets, which can bend and break over time, our planters are characterized by their durability.

Thanks to the advanced design of our Hyper-core building board, we have effectively eliminated the risk of bending and cracking. Unlike other alternatives that rely on wooden reinforcing bars, our planters retain their strength without adding weight or bulk. Due to our innovative solution, we can offer individual sizes for planters, which is not possible with normal fiberglass panels.

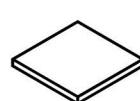

# Making Process

We begin by producing large panels of our Hyper-core construction system. These panels are then carefully cut to the specific measurements required by the buyer.

We then piece together these smaller panels to create the form of a planter. After assembling the panels, our team takes an extra step to refine each planter and ensure it is ready for the finishing phase through sanding.

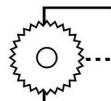

*Cutting the hyper-core plate.*

# Quality Control

At every stage of production, our planters undergo rigorous quality control checks. Our dedicated team of quality inspectors test each planter to ensure it meets our standards for strength, durability and finish. This comprehensive quality control process guarantees that every planter that leaves our factory is of the highest quality and can beautify both indoor and outdoor spaces.

*Checking the edges of standard pot.*

# STANDARD COLLECTION

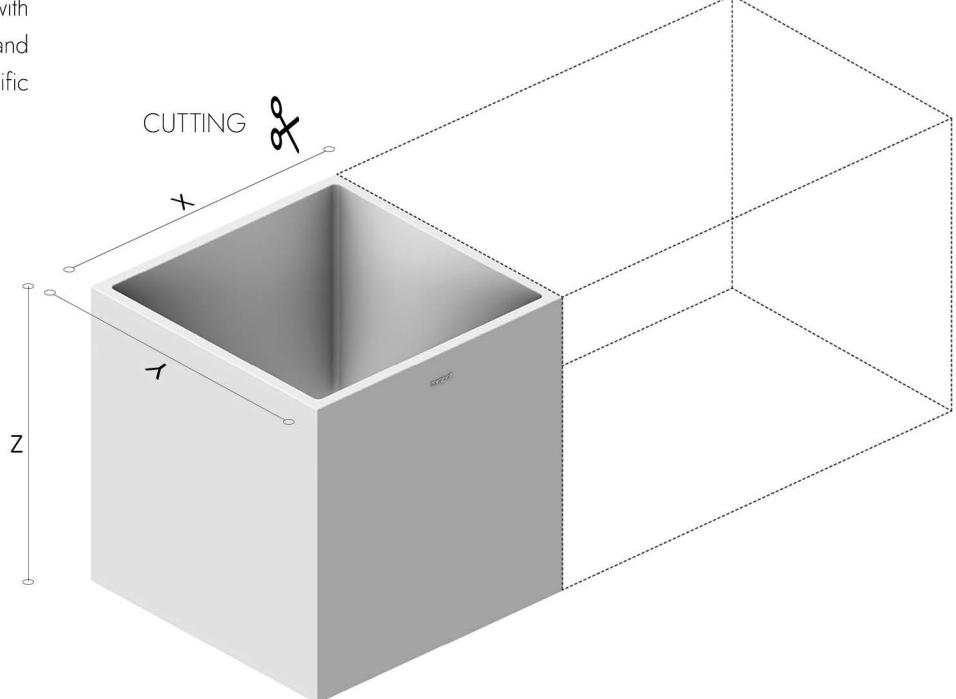

| STRENGTH | LIGHTNESS | DURABILITY | UV - RESISTANCE |

All colors and textures can be found under the Finishes category.

## CUSTOM MADE

All pots within the Standard product line are offered in customizable dimensions and are available in an extensive array of RAL colors, providing clients with the flexibility to tailor both size and color according to their specific preferences and requirements.

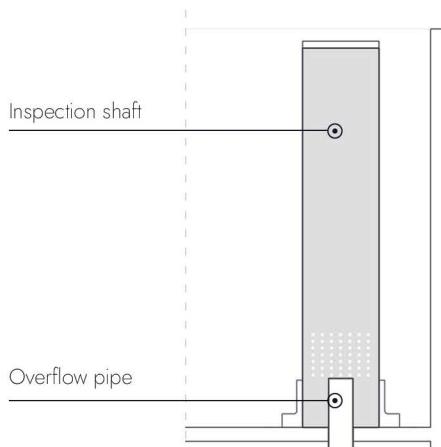

# Features

| drainage - feet - hooks - wheels |

## Drainage solution

We provide diversified drainage solutions customized to your needs, ranging from simple hole drilling to comprehensive options like overflow pipes with inspection shafts.

Section through inspection shaft and overflow pipe.

Side and bottom pipes.

## Feet

All feet are made from premium composite materials and are glued to the bottom with high-quality polyurethane adhesive. With this solution, there is no need for drilling the planter, keeping the bottom intact if needed.

Usually there are 3 hooks inside a pot.

## Hooks

As your planters increase in size, so do the challenges related to wind resistance. To ensure your plants remain securely anchored, we offer a practical solution — the option to install hooks. These hooks provide a stable anchor point for your plants, preventing any risk of them falling and increasing the overall stability of your planter.

## Wheels

With rectangular pots collection we have the option of installing wheels. The weight limit per one pot is 1500 kg.

# Finishes

| terapot - RAL - textures |

## Terapot Colors

Enhance your space with our exclusive metallic colors, created for lasting beauty and toughness. Each shade is thoughtfully designed, and our varnish guarantees an eye-catching, long-lasting finish. With our exceptional metallic colors, you can find the perfect combination of style and durability.

# RAL Color

Beautify your space with colors that reflect your unique esthetic. With our painting service, you can customize any pot in any shade from the RAL palette, known for its variety and precision.

What is the RAL palette? RAL is an internationally recognized system of standardized colors that offers a wide range of shades. Whether you dream of classic tones or modern experimentation, the RAL palette allows you to customize your pots to your exact taste. You have the flexibility to order colors in gloss or matte finishes, allowing you to accommodate a variety of esthetic preferences.

# Textures

## | corten - duaflex |

With this technique we achieve the effect of real rust on your chosen pot. First, we apply a double layer of a special coating containing large metal filings. We then add an acid that accelerates the corrosion process of the metal and creates a surface layer of rust. Finally, we apply a protective coating that prevents further corrosion, protects the surface from external influences and makes the pot easier to maintain.

*Plants look satisfied with corten.*

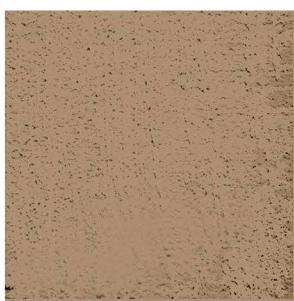

## Duaflex coat

Special Duaflex textures have proven to be an excellent solution for both exterior and interior decoration. If you want to move away from standard solutions such as ordinary paints and coatings, this is definitely an option for you. You can visit the website via the QR code where you will find over 200 shades. However, we have selected 4 favorite colors that you can see in the pictures below.

# Trust In Our Team

At Terapot, we stand by the quality of our products. That's why we offer our valued customers a five-year guarantee. This warranty ensures that our planters are built to last, reflecting our commitment to durability and customer satisfaction. We assure you that our products are designed to withstand the test of time so you can be confident in your purchase.
